

Attorney's Docket No. TN223
Amendment

Serial No. 09/998,360
April 12, 2004

Please amend the claims as follows:

CLAIMS:

1. (Currently Amended) A system for identifying a potential for financial irregularity in a financial transaction, comprising:
a first database (18) for storing data on at least one ~~selected~~ transaction and for containing information related to at least one client and at least one account of said at least one client upon which said at least one transaction can be effected;
a processor (20) loaded with a rules engine (22), including a predetermined set of predetermined rules said predetermined rules being selectable from a set of rules available for selection by an institution responsible for said first database, said predetermined set of predetermined rules to apply to said at least one transaction for determining a potential for the presence of financial irregularity in said at least one ~~selected~~ transaction, the processor being operable to access the data in the database to run the predetermined set of rules in respect of the data and to produce an outcome (116, 124, 132) indicative of the potential for a financial irregularity being present in the at least one transaction.
2. (Original) The system of claim 1 in which the processor is operable to produce numerical outcome for each rule that is transgressed by the transaction.
3. (Original) A system of claim 1 in which the set of rules includes a first group of rules corresponding to client information in the data.
4. (Original) The system of claim 1 in which the set of rules includes a second group of rules corresponding to account information in the data.

Attorney's Docket No. TN223
Amendment

Serial No. 09/998,360
April 12, 2004

5. (Original) The system of claim 1 in which the set of rules includes a third group of rules corresponding to transaction information in the data.
6. (Original) The system of claim 1 in which the processor is operable to combine the outcomes of running at least a selection of the rules in the set to produce an overall outcome indicative of the potential for a financial irregularity.
7. (Original) The system of claim 1 in which the processor is further operable to apply a weighting function to the outcome of running each rule according to the importance of the rule to the potential for a financial irregularity being present in the transaction.
8. (Original) The system of claim 6 including user input means for varying the weighting function applied to at least one of the rules.
9. (Original) The system of claim 1 including user input means for disabling at least one of the rules.
10. (Original) The system of claim 2 in which the processor includes a routine for applying a threshold value to each outcome, which routine is arranged to generate an output of transgression of the rule if the threshold is crossed.
11. (Original) The system of claim 6 in which the processor includes a routine for applying a threshold value to the overall outcome, which routine is arranged to generate an output indicating the potential for a financial irregularity being present if the threshold is crossed.
12. (Original) The system of claim 1 in which at least one of the rules is run in respect of the data to produce the outcome relative to a pattern of activity data corresponding to the rule.

Attorney's Docket No. TN223
Amendment

Serial No. 09/998,360
April 12, 2004

13. (Original) The system of claim 12 including an archive for storing the transaction data, the processor means being arranged to access the archive to establish the said pattern based on previous related transactions.

14. (Original) The system of claim 1 in which the set of rules includes rules corresponding to client, account and transaction information, the set of rules being selected from the group comprising:

a) transaction amount exceeds average transaction amount for the account by a parameterised limit;

b) transaction amount exceeds average transaction amount for the account by a parameterised percentage;

c) number of transactions against the account has been exceeded by a parameterised percentage;

d) transaction amount exceeds account transaction limit;

e) transaction amount exceeds parameterised limit;

f) transaction is destined for or has come from a listed country;

g) transaction is destined for or has come from an OFAC listed country;

h) i) transaction is for a listed currency;

ii) transaction is for a listed country/currency combination;

iii) transaction is destined for or has come from a listed financial institution;

i) many small deposits followed by a large withdrawal;

j) activity against an account that the user has identified as being dormant;

k) balance exceeds a parameterised limit;

l) many deposits over several branches of the user;

m) large balance over many accounts or clients;

n) deposits larger than average for the postcode;

o) balance larger than average for the postcode;

p) activity against an account or client where there has been no activity for a parameterised period; and

Attorney's Docket No. TN223
Amendment

Serial No. 09/998,360
April 12, 2004

q) activity against an account marked as suspicious already.

15. (Original) The system of claim 7 in which a further weighting function is applied to a predefined collection of rules which are transgressed in respect of the same or related transactions.

16. (Original) The system of claim 1 in which the financial transaction is a bank transaction.

17. (Original) The system of claim 1 in which the financial irregularity is money laundering.

18. (Original) The system of claim 1 in which the processor includes an extract routine for accessing transaction data from a second database and for transferring the said data to the said first database.

19. (Original) The system of claim 1 in which the outcome is translated into a user alert indicative of the potential for the presence of a financial irregularity in the transaction.

20. (Original) The system of claim 10 in which the said output is a user-readable alert.

21. (Original) The system of claim 11 in which the said output is a user-readable alert.

22. (Currently Amended) A method of identifying a potential for financial irregularity in a financial transaction, comprising:

storing data (18) on at least one selected transaction into a first database for containing information related to at least one client and at least one account of said at least one client upon which said at least one transaction being stored in

Attorney's Docket No. TN223
Amendment

Serial No. 09/998,360
April 12, 2004

this step can be effected;

running the at least one ~~selected~~ transaction through a processor (20) that operates a predetermined set of predetermined rules said predetermined set of rules being selectable from a set of rules available for selection by an institution responsible for said first database, said predetermined set of predetermined rules to apply to said at least one transaction together with said related information in order to detect ~~detecting~~ a potential for the presence of financial irregularity in said at least one transaction predetermined set of rules (22) for detecting a ~~potential for the presence of financial irregularity therein~~ to produce an outcome (116, 124, 132) indicative of the potential for a financial irregularity being present in the transaction.

23. (Original) A method of claim 22 in which a numerical outcome is produced for each rule that is transgressed by the transaction.

24. (Original) The method of claim 22 in which the set of rules includes a first group of rules corresponding to client information in the data.

25. (Original) The method of claim 22 in which the set of rules includes a second group of rules corresponding to account information in the data.

26. (Original) The method of claim 22 in which the set of rules includes a third group of rules corresponding to transaction information in the data.

27. (Original) The method of claim 22 in which the outcomes of running at least a selection of the rules in the set is combined to produce an overall outcome indicative of the potential for a financial irregularity.

28. (Original) The method of claim 22 in which a weighting function is applied to the outcome of running each rule according to the importance of the rule to the potential for a financial irregularity being present in the transaction.

Attorney's Docket No. TN223
Amendment

Serial No. 09/998,360
April 12, 2004

29. (Original) The method of claim 28 including varying the weighting function applied to at least one of the rules by user input.

30. (Original) The method of claim 27 including disabling at least one of the rules by user input.

31. (Original) The method of claim 22 including applying a threshold value to each outcome and generating an output for transgression of the rule if the threshold is crossed.

32. (Original) The method of claim 27 including applying a threshold value to the overall outcome and generating an output indicating the potential for a financial irregularity being present if the threshold is crossed.

33. (Original) The method of claim 22 including running at least one of the rules in respect of the transaction data to produce the outcome relative to a pattern of activity data corresponding to the rule.

34. (Original) The method of claim 33 including storing the data in an archive and accessing the archive to establish the said pattern based on previous related transactions.

35. (Original) The method of claim 22 in which the set of rules include rules corresponding to client, account and transaction information, the set of rules being selected from the group comprising:

- a) transaction amount exceeds average transaction amount for the account by a parameterised limit;
- b) transaction amount exceeds average transaction amount for the account by a parameterised percentage;
- c) number of transactions against the account has been exceeded by a

parameterised percentage;

- d) transaction amount exceeds account transaction limit;
- e) transaction amount exceeds parameterised limit;
- f) transaction is destined for or has come from a listed country;
- g) transaction is destined for or has come from an OFAC listed country;
- h) i) transaction is for a listed currency;
- ii) transaction is for a listed country/currency combination;
- iii) transaction is destined for or has come from a listed financial

institution;

- i) many small deposits followed by a large withdrawal;
- j) activity against an account that the user has identified as being dormant;
- k) balance exceeds a parameterised limit;
- l) many deposits over several branches of the user;
- m) large balance over many accounts or clients;
- n) deposits larger than average for the postcode;
- o) balance larger than average for the postcode;
- p) activity against an account or client where there has been no activity for a parameterised period; and
- q) activity against an account marked as suspicious already

36. (Original) The method of claim 27 including applying a further weighting function to a predefined collection of rules which are transgressed in respect of the same or related transactions.

37. (Original) The method of claim 22 in which the financial transaction is a bank transaction.

38. (Original) The method of claim 22 in which the financial irregularity is money laundering.

Attorney's Docket No. TN223
Amendment

Serial No. 09/998,360
April 12, 2004

39. (Original) The method of claim 22 including extracting transaction data from a second database associated with a financial application and transferring the said data to the first database.

40. (Original) The method of claim 22 in which the outcome is translated into a user alert indicative of the potential for the presence of a financial irregularity in the transaction data.

41. (Original) The method of claim 31 including generating the said output as a user-readable alert.

42. (Original) The method of claim 32 including generating the said output as a user-readable alert.

43. (Currently Amended) A method of identifying a potential for money laundering in a financial transaction associated with a financial institution, comprising:

extracting relevant data on the transaction from a financial transaction account database associated with an application program, and storing the extracted transaction data in a second database;

~~running~~ examining the extracted relevant data from said financial transaction ~~through against a predetermined~~ set of rules selectable by an institution for detecting a potential for the presence of a financial irregularity therein indicated by finding a transgression of one or more of the predetermined set of rules and, based on said examining, to produce ~~producing~~ an outcome indicative of the potential for a financial irregularity being present in the transaction;

~~weighting the outcome of running the financial transaction through the set of rules;~~

producing a user-readable output of the ~~rules~~ transgression if any

Attorney's Docket No. TN223
Amendment

Serial No. 09/998,360
April 12, 2004

transgression exceeds a predetermined threshold;

providing a user operable input device by which to set the weights against each rule; and

providing a user operable input device by which to set the threshold in respect of the set of rules.

44. (Original) A computer-readable medium having computer-executable instructions for performing a method comprising:

storing data (18) on at least one selected transaction;

running the at least one selected transaction through a predetermined set of rules (22) for detecting a potential for the presence of financial irregularity therein to produce an outcome (116, 124, 132) indicative of the potential for a financial irregularity being present in the transaction.

45. (Original) The computer readable medium of claim 44 performing the method in which a numerical outcome is produced for each rule that is transgressed by the transaction.

46. (Original) The computer readable medium of claim 44 performing the method in which the set of rules includes a first group of rules corresponding to client information in the data.

47. (Original) The computer readable medium of claim 44 performing the method in which the set of rules includes a second group of rules corresponding to account information in the data.

48. (Original) The computer readable medium of claim 44 performing the method in which the set of rules includes a third group of rules corresponding to transaction information in the data.

49. (Original) The computer readable medium of claim 44 performing the

Attorney's Docket No. TN223
Amendment**Serial No. 09/998,360**
April 12, 2004

method in which the outcomes of running at least a selection of the rules in the set is combined to produce an overall outcome indicative of the potential for a financial irregularity.

50. (Original) The computer readable medium of claim 44 performing the method in which a weighting function is applied to the outcome of running each rule according to the importance of the rule to the potential for a financial irregularity being present in the transaction.

51. (Original) The computer readable medium of claim 50 performing the method including varying the weighting function applied to at least one of the rules by user input.

52. (Original) The computer readable medium of claim 44 performing the method including disabling at least one of the rules by user input.

53. (Original) The computer readable medium of claim 44 performing the method including applying a threshold value to each outcome and generating an output for transgression of the rule if the threshold is crossed.

54. (Original) The computer readable medium of claim 49 performing the method including applying a threshold value to the overall outcome and generating an output indicating the potential for a financial irregularity being present if the threshold is crossed.

55. (Original) The computer readable medium of claim 44 performing the method including running at least one of the rules in respect of the transaction data to produce the outcome relative to a pattern of activity data corresponding to the rule.

56. (Original) The computer readable medium of claim 55 performing the

Attorney's Docket No. TN223
Amendment**Serial No. 09/998,360**
April 12, 2004

method including storing the data in an archiv and accessing the archive to establish the said pattern based on previous related transactions.

57. (Original) The computer readable medium of claim 44 performing the method in which the set of rules include rules corresponding to client, account and transaction information, the set of rules being selected from the group comprising:

- a) transaction amount exceeds average transaction amount for the account by a parameterised limit;
- b) transaction amount exceeds average transaction amount for the account by a parameterised percentage;
- c) number of transactions against the account has been exceeded by a parameterised percentage;
- d) transaction amount exceeds account transaction limit;
- e) transaction amount exceeds parameterised limit;
- f) transaction is destined for or has come from a listed country;
- g) transaction is destined for or has come from an OFAC listed country;
- h) i) transaction is for a listed currency;
 - ii) transaction is for a listed country/currency combination;
 - iii) transaction is destined for or has come from a listed financial institution;
- i) many small deposits followed by a large withdrawal;
- j) activity against an account that the user has identified as being dormant;
- k) balance exceeds a parameterised limit;
- l) many deposits over several branches of the user;
- m) large balance over many accounts or clients;
- n) deposits larger than average for the postcode;
- o) balance larger than average for the postcode;
- p) activity against an account or client where there has been no activity for a parameterised period; and
- q) activity against an account marked as suspicious already

Attorney's Docket No. TN223
Amendment

Serial No. 09/998,360
April 12, 2004

58. (Original) The computer readable medium of claim 49 performing the method including applying a further weighting function to a predefined collection of rules which are transgressed in respect of the same or related transactions.

59. (Original) The computer readable medium of claim 44 performing the method in which the financial transaction is a bank transaction.

60. (Original) The computer readable medium of claim 44 performing the method in which the financial irregularity is money laundering.

61. (Original) The computer readable medium of claim 44 performing the method including extracting transaction data from a second database associated with a financial application and transferring the said data to the first database.

62. (Original) The computer readable medium of claim 44 performing the method in which the outcome is translated into a user alert indicative of the potential for the presence of a financial irregularity in the transaction data.

63. (Original) The computer readable medium of claim 53 performing the method including generating the said output as a user-readable alert.

64. (Original) The computer readable medium of claim 54 performing the method including generating the said output as a user-readable.

65. (Currently Amended) A computer-readable medium having computer-executable instructions for performing a method comprising:

extracting relevant data on the transaction from a financial transaction account database associated with an application program, and storing the extracted transaction data in a second databas ;

~~running~~ xamining the extracted relevant data from said financial

Attorney's Docket No. TN223
Amendment

Serial No. 09/998,360

transaction ~~through~~ against a predetermined set of rules selectable by an institution for detecting a potential for the presence of a financial irregularity therein indicated by finding a transgression of one or more of the predetermined set of rules and, based on said examining, to produce ~~producing~~ an outcome indicative of the potential for a financial irregularity being present in the transaction;

weighting the outcome of ~~running the financial transaction through the set of rules~~;

producing a user-readable output of the ~~rules~~ transgression if any transgression exceeds a predetermined threshold;

providing a user operable input device by which to set the weights against each rule; and

providing a user operable input device by which to set the threshold in respect of the set of rules.

66. (New) The method of claim 43 further comprising;
archiving transaction data into a data archive after said examining step.
67. (New) The computer readable medium of claim 65, wherein said method performed further comprises:
archiving transaction data into a data archive after said examining step.
